Interior design VR application on a smartphone

Motivation: This app is an interior design virtual reality application that allows you to a wide variety of virtual reality experiences before moving into a new building. So, you can virtually tour your next model home, imagine space before construction, and showcase in your best in design. Through the use of the innovative virtual reality apps and visualization tools, enable user touch controls, move around and envision features and finishes- true to quality and design.

Business opportunity: It is an effective, cost-reducing sales and marketing tool that is poised to become the foundation for successful new home and condo sales.

Google VR SDK for Unity: Use Unity to build virtual reality apps for Android and iOS.
